

Daniel Méndez

Software Developer

About me

In addition to my study as a Computer and Telecommunications engineer, during all these years I have sought to form me as an integral person, concerned about his environment and context. I have learned to work in team, participating and leading interdisciplinary working groups in the development of several projects. I've taken a special interest in being critical – with me and those around me – and yet empathetic, those who have led to a significant improvement in my ability to communicate with my peers. I'm ready to put into practice everything I've come building so many years ago. That's why I'm looking for a job in a place where the professional is valued for what can achieve and by their performance, in a place where they guide you instead to limit yourself, where you can put your ideas into practice and been heard. I'm looking for a place where I can develop as professional without neglecting my passions and my ideas, where I can complement my personal projects with the work duty.

Profesional experience

Sept. 2023 – Sept. 2024	Software development	@Djavu – Santiago, CL 🇨🇱	Working in Djavu I could participate in two projects. Both were developed using Python with its framework Django 4.2 and Vue JS 3 . The first one included the sprint's planning, database design and a mobile app development with georeferencing. Also I worked maintaining a restaurant management ERP built for peumayén. There I could apply the same technical stack to develop new functions, fixing errors and develop unit test.
April 2020 – March 2022	Software Development Engineer	@Umáximo – Santiago, CL 🇨🇱	I was in charge of the platform's growth. Here I developed several new features for the system for both the back end and the front end, as well as for the management section of Umaximo's resources. For the back end we use PHP with Codeigniter 3.11 and for the front end it was Javascript with jQuery . Using that last technology, solutions were implemented for plugins such as DataTables , CKEditor and Phaser . Also, I implement the use of GIT as a versioning tool using the git flow process.
Feb. 2019 – Dec. 2019	Web development	@Canal Cero Digital – Santiago, CL 🇨🇱	Design and development of http://pegasconsentido.cl platform. <i>Database and software design</i> . Developed using PHP and Laravel 5.7 . Worked on the software <i>deployment configuration</i> using Digital Ocean Cloud and Gitlab CI . GIT implementation as versioning tool for the team.

Metabase configuration and deployment, open source platform for data visualization. **Prestashop** integration with **TodoVa API** delivery process automation.

April 2019 –
Feb. 2019

Trainee Infrastructure Architect @SONDA S.A – Santiago, CL 🇨🇱

Web services deployment in **Azure** virtual machines. Research and presentation of **Azure Security Center** to the security team in order to evaluate which tools could be used in the company's environment. Infrastructure administration and monitoring. POC implementation for a multi cloud architecture using **Chef**.

Education

2020, 6 months **DevOps Certification** @Mundos E & U. Nacional de Cordoba

We saw from software development to DevOps culture. We review the principal concepts of Front End, Back End and Data End develop, how to put all the team in coordination to achieve the software goals. Several tools for delivery automation's such as Jenkins. And a brief introduction to Docker and Kubernetes. [Check certification here.](#)

2013 – 2018 **Computer and Telecommunications Engineer** @U. Diego Portales

As a student I was an active member of the faculty politics, being member of the student and school council. Also, I was assistant teacher of several subject as Programming, Advanced Programming, Algorithm and Data structures and System architecture.

2009 – 2013 **Computer science** @U. Diego Portales

After 4 years of career I realized the "science" it wasn't the same as Informatics. I noticed that I did not want to be a Scientist, investigation wasn't what I what looking for so I changed career.

Personal project

2022 – 2023 **Orders automation**

We develop a system to have a better control of money flow in a coffee store. For that, we automate the order generation with **Python** and its frameworks **Django** and **Django REST framework**.

Languages

Nativo	🇪🇸 Spanish	Nacido y criado
Advanced	🇬🇧 English	Let's talk
Hobby	🇵🇹 Portuguese	Eu gosto Brasil
	🇩🇪 German	Hallo, wie geht?

Other activities and interest

Free culture and software, afro descendants dances, theatre. Nature and bird photography.

Additional information

Valores	Diligence, honesty and perseverance.
Renta	\$1.600.000 – \$1.800.000 CLP monthly net payment by contract or 0.38 UF per hour as a freelance. Immediately availability for full time or freelance jobs.
